

Problem-Solution Fit

Date	14 July 2026
TeamID	SWUID2026221635
ProjectName	A Comprehensive Measure of Well-Being (HDI Prediction & Analysis)
Maximum Marks	5 Marks

Problem-SolutionFit Canvas:

Use the framework below to ensure your proposed solution accurately addresses the root causes, behaviors, and limitations of your target audience. Fill out the canvas in the respective boxes just like the original visual template.

1. CUSTOMER SEGMENT(S) [CS] Government policymakers, global development researchers, United Nations/World Bank data analysts, and academic students studying economics.	6. CUSTOMER LIMITATIONS EG. BUDGET, DEVICES [CL] Technical limitations (users are policymakers, not machine learning experts), lack of high-end computational infrastructure, and limited software budgets.	5. AVAILABLE SOLUTIONS PROS & CONS [AS] <i>Solutions:</i> Manual spreadsheets or retroactively looking at published annual UN reports. <i>Pros:</i> Established and verified statistics. <i>Cons:</i> Rigid, completely retroactive, and lacks real-time simulation or predictive foresight
2. PROBLEMS / PAINS + ITS FREQUENCY [PR] Tracking and analyzing complex, multidimensional development indicators across multiple countries. Frequency: Constant (during daily research or policy cycles).	9. PROBLEM ROOT/ CAUSE [RC] Traditional development models assess parameters strictly in hindsight. There is no predictive system that simulates how changing individual parameters	7. BEHAVIOR + ITS INTENSITY [BE] Relying heavily on manual comparison charts and long cross-department review meetings to decipher target metrics. Intensity: High (errors drastically impact public funding allocations).

	dynamically alters the comprehensive final HDI tier ranking.	
3. TRIGGER TO ACT [TR] Periodic releases of new global economic/health data, urgent budget allocation planning, or national mandates to improve a country's development standing.	10. YOUR SOLUTION [SL] An interactive, Web-based Machine Learning application using Flask and Scikit-learn that accurately predicts and visualizes global human development tiers instantly based on user-inputted metrics.	8. CHANNELS OF BEHAVIOR [CH] ONLINE: Browsing official databases, static economic portals, and emailing static data reports.
4. EMOTIONS BEFORE / AFTER [EM] • <i>Before:</i> Overwhelmed by massive raw datasets; uncertain if their policy interventions will accurately shift the nation's tier. • <i>After:</i> Confident, clear-headed, and empowered by instantaneous, data-driven simulation tools.		OFFLINE: Inter-departmental meetings, policy drafting boards, and public presentations.
