

Team Involvement in Demonstration

Date	14 July 2026
TeamID	SWUID2026221635
ProjectName	A Comprehensive Measure of Well-Being (HDI Prediction & Analysis)
MaximumMarks	1Mark

Team Involvement in Demonstration:

This document records the active participation and roles of each team member during the project demonstration. It ensures that every member contributes meaningfully to the presentation and that responsibilities are distributed fairly and clearly.

S.No	TeamMemberName	Role in Demo	Section Presented	Contribution Summary	Participation (Active/Passive)
1	Pbvsn Mahitha	Presenter & Project Lead	Introduction, Scope, and User Management	Explained the multidimensional structure of well-being, project objective, and walked through user account controls.	Active
2	Sneha Potluri	Architecture Presenter	System Architecture & Database Structure	Demonstrated the Flask backend layout, template routing mechanisms, and data management workflows.	Active
3	Venkatesh Bonthu	Technical ML Expert	ML Engine Optimization & Persistence	Walked the evaluator panel through dataset preprocessing, Linear Regression training, and model saving via Pickle.	Active
4	Moka Jaswanth	Functional Tester	Live Core Dashboard Walkthrough	Shared screen to showcase live interactive parameter sliders and how changing indicators dynamically triggers updates.	Active
5	Gopika Snigdha	UI & Report Presenter	Data Visualization & PDF Reports	Explained the data rendering layer using Matplotlib/Seaborn	Active

				and showcased the final analytical report export flow.	
6					

Team Coordination Notes:

Aspect	Details
Team Leader/Coordinator	Pbvsn Mahitha effectively managed the synchronization between frontend UI changes and backend model integrations, assigning distinct roles for a seamless final presentation.
Overall Team Coordination Rating(1-5)	5 / 5 (Every team member successfully delivered their assigned features, and code integration passed version control metrics perfectly).
Any issues during demo	During initial trial rehearsals, loading the <code>.pkl</code> file occasionally threw directory path mismatches on different operating systems.
How issues were resolved	The team resolved this by refactoring the script to utilize Python's built-in <code>os.path.join</code> library, ensuring dynamic and cross-platform file paths regardless of the host machine configuration.
